READING 2 (Items 6-12) **(7 marks)**

Read the text. Then, for each item, shade in the bubble ⬭ next to the correct option.

Have you ever heard someone wondering, "Will robots control our world over time?" This concern arises because of the sudden and significant emergence of robots. However, I will shed light on important points.

Robots are like super helpful machines that can do many different jobs. They're smart and can work in places where it might be dangerous for people. Robots, often equipped with artificial intelligence, are getting even smarter and some can work alongside humans, making things more efficient.

One amazing thing about robots is their ability to handle various tasks. These machines play a crucial role, as they are used in surgeries, helping doctors to be super precise. They are also widely used in factories for various tasks, contributing to increased efficiency, precision, and safety in manufacturing processes. For example, they are employed to transport and handle materials, package finished products, and manage inventory-related tasks, including counting, sorting, and overseeing stock in warehouses or manufacturing facilities.

Robots are not limited to industrial or medical settings; they are becoming essential parts of our daily lives at home, such as smart vacuum cleaners and personal assistants. Additionally, we use social media platforms in our daily life, and these platforms employ algorithms, considered a form of artificial intelligence, to analyze user behavior and offer personalized content. While this enhances convenience, we also need to think about things like privacy and keeping our information safe.

Sometimes people worry that robots might take over some jobs, but we can work on ways to make sure everyone has the right skills for the future. We also need to make sure that robots follow good rules and don't make decisions that could be a problem for people.

In the end, robots are pretty amazing, doing lots of helpful things. But, as we use them more, we have to think about the rules and how they might affect our jobs and lives. It's like finding a good balance so that robots make life better for everyone.

Afdhe.oman.edu

6. ---------- is often added to robots, making them smarter and more efficient.

- **Internet**
- **Artificial intelligence**
- **Smart vacuum**

7. In medical care, robots play a significant role, particularly in ---------- .

- **manufacturing**
- **medication management**
- **surgeries**

8. Robots are used in factories for all these tasks except ---------- .

- **handling materials**
- **packaging**
- **Conducting market research**

9. ---------- is often used by social media platforms to analyze user behavior.

- **Artificial intelligence**
- **Algorithms**
- **Robotics**

10. In the context of daily life involving robots and social media, we should consider ---------- .

- **robots**
- **industrial settings**
- **privacy**

11. One of the concerns related to robots is that they might ---------- .

- **provide training**
- **take harmful decisions**
- **increase significantly**

12. The writer believes that we can ensure that robots make life better for everyone by ---.

- **stop using robots**
- **relying on robots to solve all our problems**
- **using robots responsibly and thoughtfully**

READING 3 (Items 13-20) **(8 marks)**

Read the text. Then complete the tasks.

Dr. Abdul Rahman Al-Sumait was an Islamic scholar, medical practitioner but more importantly, a humanitarian. He was born in 1947 in Kuwait. He was famously known for his voluntary and charity work in more than 29 African countries.

Al-Sumait was a qualified doctor in internal medicine before becoming involved in charity work. In 1972, he graduated from the University of Baghdad with a degree in Medicine and Surgery and then he got a diploma in Tropical Diseases from the University of Liverpool in 1974. He completed his specialisation degree in medicine from McGill University in Canada in 1978. He published some scientific research articles and 13 different books.

Al-Sumait's interest in charity work started as a secondary school student when he observed poor workers waiting for transport in the heat. With some friends he decided to save up from their pocket money and buy an affordable car to drive these workers for free. At university, Al-Sumait used the majority of his monthly salary to purchase Islamic books and distribute them at mosques.

Al-Sumait became interested in Africa when he felt and saw that it was being neglected. African countries became the focus of his operations. In 1981, Abdul Rahman Al-Sumait founded the Africa Muslims Agency, which was later renamed as 'Direct Aid' society. He also established Kuwait Relief Agency and was the chief editor of Al-Kawthar Magazine. When he was 35 years old, he decided to move and live in Africa. He dedicated 29 years of his life there, helping millions of children with education, food, shelter, and religion.

'Direct Aid' provides extensive humanitarian assistance to poor Muslims throughout Africa. It has built 124 hospitals, 840 schools, 4 universities, 204 Islamic Centers, 214 women training centers and 2,200 mosques. The society has also established two colleges in Kenya and Zanzibar and offered 200 scholarships to Muslim African students to continue their higher studies in medicine, engineering and technology.

Although Al-Sumait's journey in Africa was a major success, it was full of difficulties. Because of his long travels in African jungles, he got high blood pressure, diabetes, and malaria. In Mozambique, Kenya, and Malawi, he was attacked by deadly cobras. Some armed groups in these areas also tried to kill him because of his impact on the poor and needy. However, he remained determined to accomplish his aim of bringing peace, aid, and relief to Africa.

Afdne.oman.edu

Task One: *For each item, write a short answer (**not more than FOUR WORDS**).*

13. What made Al-Sumait a well-known character?
_____

14. Why did Al-Sumait choose Africa for his operations?
Because it _____
